

Asset Manager

fast, simple, asset control
using barcodes

Asset Manager

Asset Manager by The PERCS Index is designed to automate the processes involved with the control of capital assets. This is achieved through the use of Windows™ technology, advanced screen layouts, sophisticated database design and bar code technology. The increased efficiencies of automating this traditionally manual process is directly translated into savings in manpower hours in locating, valuing and maintaining control of your capital assets.

Asset Control

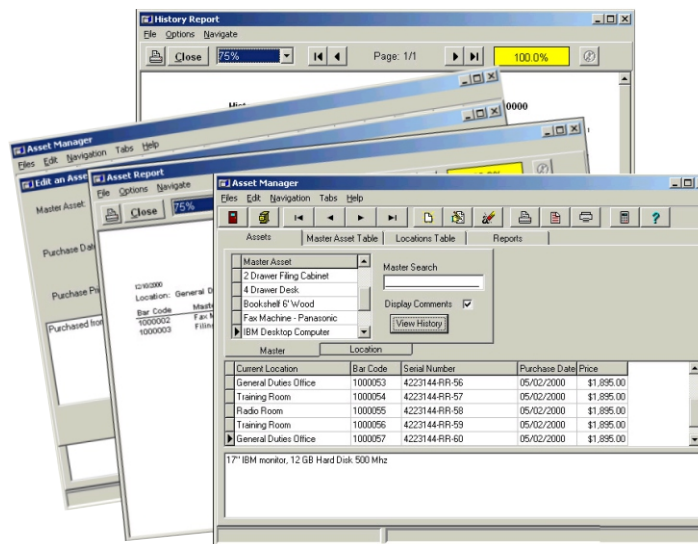

Asset Manager makes it simple to maintain control of your capital assets in one or multiple locations. Detailed information on each of your assets is entered into the system. This information can include purchase date, value, serial number, location and other information such as warranty details, vendor etc. Once the information has been entered into the system, bar code labels are generated and affixed to the asset. Labels can also be created for the location of the asset. Standard

Simple to Use

Asset Manager utilizes the latest in screen design concepts to minimize the learning curve of users familiar with standard Windows™ protocols. A fully featured on-line Help system is included to answer any questions a user may have. The use of bar code technology enables inventory counts to be conducted using a simple 'point and shoot' procedure. The inventory counts can then be downloaded to the system and on hand quantities and changes in location will be updated

Return on Investment

With Asset Manager, you are able to better maintain control of your capital assets. This additional control allows you to better manage the allocation of funds for replacement or addition of capital assets. Substantial savings in time can be realized through the automation of the inventory process and the tracking of the movement of your assets from department to department. Further returns on your investment can be realized by providing immediate response to asset location due to powerful database search tools and time saving through elimination of repetitive forms

Asset Manager Components

Basic Package includes:

- Asset Manager software
- 4,000 Bar Code Labels
- One year of Technical Support

Equipment required not included:

- PC with Windows™ 7 - 10
- 32 MB RAM, 20 MB Hard Drive available
